## GLOSSARY

### Test Case

Set of **test case preconditions**, inputs (including actions, where applicable), and expected results, developed **to drive the execution of a test item to meet test objectives**, including correct implementation, error identification, checking quality, and other valued information

### Test Coverage Item

Attribute or combination of attributes that is derived from one or more test conditions by using a test design technique that enables the measurement of the thoroughness of the test execution.

### Test Coverage

Degree, **expressed as a percentage**, to which specified test coverage items have been exercised by a test case or test cases

### Test Case Specification

Documentation of **a set of one or more test cases**

Rujukan:

ISO Standard (ISO/IEC/IEEE 29119-1) – Concepts and definitions

## OBJEKTIF: PENYEDIAAN SPESIFIKASI KES UJIAN

- ✓ The **Test Basis** for each test item is analyzed;
- ✓ The features to be tested are combined into **Feature Sets**;
- ✓ The **Test Conditions** are derived;
  - The **Test Coverage** items are derived;
  - **Test Cases** are derived;
    - **Test Sets** are assembled.
    - **Test Procedures** are derived.

## PENGENALAN SPESIFIKASI KES UJIAN

SPESIFIKASI  
KES UJIAN

- The **Test Case Specification** identifies the test coverage items and the corresponding test cases derived from the test basis for one or more feature sets.
- Test cases should be **repeatable, verifiable and traceable back** to the test basis

## LANGKAH-LANGKAH

1. Determining in which test areas low-level or high-level test cases are appropriate
2. Determining the test technique(s) that will enable the necessary test coverage to be achieved. The techniques that may be used are established during test planning.
3. Using test techniques to design test cases and sets of test cases that cover the identified test conditions
4. Capturing bi-directional traceability (e.g. between the test basis, test conditions and test cases)
5. Identifying necessary test data to support test conditions and test cases
6. Designing the test environment and identifying any required infrastructure including tools

1. Penetapan tahap keutamaan bagi test case adalah berdasarkan kepada fakta yang dirujuk seperti daftar risiko, *historical facts* dan lain-lain.
2. Merujuk kepada dokumen **Spesifikasi Rekabentuk Ujian, BRS, SRS, SDS, pemilik projek atau pasukan projek** bagi mengesahkan maklumat. Memastikan versi yang betul bagi dokumen rujukan.
3. Pastikan **Traceability Matrix** juga dikemaskini.
